

AWS IT Security and Compliance Seminar for the Financial Services Industry (FSI)

Many medium-sized FSI customers recognize that the big insurers make the move to the cloud. The question then arises: “Should we follow the same path?” The high regulatory requirements in certain areas, such as those of BaFin (Federal Financial Supervisory Authority, Germany), and open internal issues as regards IT security and compliance are often seen as stumbling blocks and are a hurdle for the beneficial use of cloud computing. Our seminar highlights FSI-specific issues and is based on our many years of experience in the financial services sector. What kind of action have other customers taken, what needs to be paid attention to, and what challenges can be solved directly?

We help overcome IT security and compliance challenges

The moderated seminar aims at sharing FSI experiences and best practices regarding regulatory issues with you. An experienced IT security and compliance expert supports the seminar participants in formulating questions and obtaining suitable answers.

Your regulatory experts will be empowered to make informed compliance-conforming decisions. Speed and regulatory matters are often seen as mutually exclusive factors. The goal is to connect these two aspects for a successful cloud journey, working together with the participants.

Your benefits

You will help your company use facts instead of gut feelings to make decisions.

We structure external BaFin or VAIT (Supervisory Requirements for IT in Insurance Undertakings, Germany) requirements as well as internal organization-specific frameworks. You will get a clear view of the common goal and benefit from our long-standing industry expertise.

Ask any question you might have – we guarantee you a compressed knowledge transfer to your regulatory experts irrespective of the cloud provider.

Work together with one of the first AWS partners

- Skaylink has been strongly engaged in the FSI environment for over twenty years now – well before the public cloud
- Our architects, IT security and compliance consultants have been working in the FSI environment for several years and have the practical experience you need
- Skaylink is the first AWS Security Competency Partner in the DACH region – Germany (D), Austria (A), Switzerland (CH)
- We not only work out theoretical approaches together with the customer, but also put them into practice

Do you like to discuss your questions with an FSI expert?

I'm glad to be of service: Nickolas.Webb@skaylink.com
