

Cloud Baselining

Blaze the trail for your successful cloud journey with cloud baselining. Our facilitated workshops with lots of supporting content will help your teams define a shared vision for the journey into the cloud. Cloud baselining covers the requirements related to IT security, governance, compliance, architecture and operational structures, taking into account technological and operational requirements as well as enterprise-ready structures. Cloud baselining is done using a structured, standardized series of workshops. All participants are given the opportunity to contribute their ideas and the relevant needs arising from their role.

360° expertise

We tie in the biggest pain points of a cloud journey and empower workshop participants to make informed shared decisions.

Your benefits

You will receive a common, documented view of the customer-specific challenges and pain points. We work out a joint vision to effectively leverage cloud possibilities – the goal needs to be achievable and known to all key roles within the organization. An individual roadmap allows you to work in a structured way to achieve your goals and to invest the necessary resources efficiently. Recommendations are based on best practices from public cloud providers and success stories from Skaylink customers.

Why Skaylink?

- Experience from a decade of cloud/IT consulting, ranging from early adoption to full-scale implementation for high-profile enterprise customers in a variety of industries.
- Partnerships with AWS and Microsoft at the elite level
- Cloud-agnostic consultation independent of an individual provider
- We can not only work out theoretical approaches together with customers, but we can also implement them in practice
- Skaylink's own architects and experts in security, governance and compliance are hand-picked and have a wealth of project experience

Do you have questions for an AWS expert?
