Migration Assessment

Smart, fast, and affordably –
we will guide you into the cloud

Each company and every working structure has different needs and requirements of an IT environment. There isn't just one way into the cloud that works for everyone. To make your move to the cloud a success, we prepare your migration in a targeted manner with our "Assess" phase: Our experts will perform a comprehensive analysis of your IT structure. This will help us get to know all the important facts to develop a clear plan for the migration. The result is a comprehensive business case that achieves the best results for you and with which you can get started quickly.

You can be certain that you will enter the cloud efficiently and affordably. And the best part? AWS will finance the assessment for you.

A clear migration plan based on an analysis of the IT structure

In the "Assess" phase, our experts dive deep into your IT infrastructure. Their experience from numerous cloud projects allows them to analyze important processes and quickly recognize where the migration can be implemented well. They also look at how to achieve the best results for your internal operations. Our well-established teams and proven methods will get your migration project into the fast lane. We integrate all important topics such as compliance, security, and governance into the "Assess" phase seamlessly.

Your benefits

We will send you a detailed analysis of your IT systems. This includes a breakdown of which operating costs are incurred by individual areas, as well as a preview of how these costs will develop in the medium term if operations continue. Our experts will compare the current state with the target state.

What would a cloud infrastructure suitable for your business look like and what costs would you expect? Based on this analysis, we work with you to develop perspectives on the possibilities your company can leverage with the AWS Cloud.

Work with an AWS partner from the very beginning

As an experienced AWS expert, Skaylink offers you many advantages as an IT partner:

- First AWS Security Competency Partner in the German-speaking region (Germany, Austria, Switzerland)
- Comprehensive support from the "Assess" phase, enablement, and technical migration to various services
- More than 100 certified experts
- More than 20 years of experience in enterprise IT for large and regulated industries
- More than 20 years of experience in migration, transformation, and digitalization projects

Do you have questions for an AWS expert?

Ready for the Cloud?

Our Readiness Assessment – check how ready you are for the migration

A uniform understanding of the next steps within the company is essential to ensure a smooth migration to the cloud. The task is to identify the gaps and the readiness level for migration.

Our Migration Readiness Assessment (MRA) is the basis for this. In a workshop for the stakeholders from all relevant departments, our team will identify a vision and the strategic direction for the leadership team and get the participants in the right mindset for the change.

Identifying strengths and weaknesses – and get started successfully in the cloud

We use an MRA tool that is based on a questionnaire. It covers the areas of organizational capability (business, people, governance) and technical capability (platforms, IT security, operations). Our experts discuss the individual segments with the stakeholders in a one-day MRA workshop.

At the end, you will receive an assessment report on the migration readiness of the individual areas. The strengths and gaps involving the migration will be shown to you in detail, among other things. A plan of action will inform you about the next useful steps to close any gaps that are discovered.

Your benefits

At Skaylink, we assess the migration readiness of companies based on best practices and the assessment of experienced consultants. You will be optimally prepared for your journey into the cloud with our MRA. The final report lets you see clearly where your company's strengths lie and what factors could slow down a migration. A plan of action with clear recommendations and measures shows you how to overcome obstacles and get started on a successful migration quickly.
