

## AWS QuickCheck

Determine your cloud potential quickly and effectively

The AWS QuickCheck uses several hundred questions to check your organization's current cloud implementation for so-called "enterprise suitability". The main part of the QuickCheck examines procedures, processes, documentation and organizational aspects at your company across all technologies.

Experienced senior cloud consultants will examine the current status of your cloud structure and hold discussions with important stakeholders. After determining your current status quo, recommendations for action and specific tasks are developed. This creates a transparent road map or agile project organization as a specific user story.

### From the status quo to a specific roadmap with clear tasks

After a preliminary discussion and coordination with an internal manager at your company, our consultant will look at the documentation provided. It is important to engage in direct dialog with the relevant AWS managers and other roles. A comprehensive pool of questions allows your current IT environment to be examined technically, procedurally, and in light of documentation. We will also examine the organizational integration of the cloud into the company and IT structure. The senior cloud consultant then develops recommendations and derives specific tasks from them, which are prioritized and organized into a schedule. As a result, your cloud experts receive direct quick wins and tasks to complete.

### Your benefits

Our consultants have gained experience on numerous cloud projects. They determine where a real impact can be made the most quickly. The AWS QuickCheck provides direct recommendations that your company can act on instead of general, vague suggestions. Clearly defined tasks that are organized in a schedule allow your IT team to implement them directly. By reviewing your AWS architecture and then embedding it in your organization, you can ensure that the IT infrastructure meets your requirements as a company – and can grow with you without hurdles.

### Work with an AWS partner from the very beginning

As an experienced AWS expert, Skaylink offers you many advantages as an IT partner:

- Skaylink was the first AWS Security Competency Partner in the German-speaking region (Germany, Austria, Switzerland).
- We have extensive AWS expertise and over 20 years of experience with enterprise IT in large and regulated industries.
- Thanks to our wide range of customers, ranging from banks, insurers, and medium-sized enterprises to ISVs and service providers, we can provide optimal advice and support that is suitable for every industry.
